CSCI 4300 Group 6 Proposal
Daiki Shinoda, Joseph Nguyen, Sarah Greene, Andrew Hoskins

Our group's proposal for the term project will be an ecommerce web application. The theme of our ecommerce web application will be an online coffee shop. We plan to separate the items that we sell into these categories: Drinks and Food. These categories are subject to change. We intend for the target user to be able to view the available drinks and food. Then be able to add the desired items to their cart and checkout for either delivery or pickup. This will be the base functionality of our ecommerce website and may add more functionality depending on time and need. Our five HTML pages include: home page, cart page, checkout page, food menu page, drink menu page.
